

Filter Dehydrators

Thermo King offers only high-efficiency filter dehydrators with a great capacity reserve. They are designed to protect the refrigerator system from water, hazardous impurities and particles and tested to work in conditions of strong and permanent vibration.

Thermo King uses a solid sintered filler with fine pores for the refrigerant to pass. In addition to this, the filler is a single unit and its particles cannot detach and get into the circuit

In Thermo King dehydrators, the filler is fully wrapped in a filter material that prevents fine particles from entering into the refrigerating circuit

Some non-original dehydrators use a granular filler. The filler granules rub against each other during vibration or during refrigerant passage, thus causing the risk of fine particles entering into the system

CHOOSE ORIGINAL SPARE PARTS

THE RISK OF A SERIOUS BREAKDOWN IS MUCH HIGHER THAN THE SAVINGS COMING FROM THE USE OF NON-ORIGINAL PARTS.

THE GENUINE ADVANTAGE

GENUINE THERMO KING PARTS:
THE BEST REPLACEMENT IS THE ORIGINAL.

Thermo King Filter

Off-The-Shelf-Filter

In a non-original filter, the amount of filler takes **less than 1/3 of the filter's volume**. This significantly reduces its capacity to remove moisture and other harmful impurities.

The use of **non-original filters** can lead to the entry of filler particles into the system and the subsequent **blockage** and **malfunction** of the system elements, up to the **breakdown** of the compressor.
